EDUCATION

Visvesvaraya National Institute of Technology, Nagpur

Bachelor of Technology in Electrical and Electronics Engineering

CGPA: 8.22

May 2020 – May 2024

EXPERIENCE

Fractal Analytics Pvt. Ltd.

Project Intern

May 2023 – July 2023

Mumbai, India

- Worked as a Project Intern under the Google Cloud Platform (GCP) team
- Analyzed 3 case studies to understand complex challenges and successful GCP-based solutions at Fractal
- Produced impactful presentations and coordinated effectively with a team of 7 members
- Sustained premier partnership with GCP by updating and verifying over 200 professional certifications

PROJECTS

Store-API | *JavaScript, MongoDB, Express, Node.js*

- Developed an e-commerce platform featuring an extensive catalog of more than 30 products
- Utilized Mongoose to design and implement the data model schema, categorizing each product by 5-6 criteria
- Carried functions like advanced filtering, searching, storing, and dynamically populating the database

CodePen Text Editor | *HTML, CSS, JavaScript, React.js*

- Developed a web platform featuring 3 distinct code editors tailored for HTML, CSS, and JavaScript
- Crafted user-friendly interface for the code editors, featuring live preview within 750 ms, minimizing re-renders
- Persisted data to storage, ensured seamless user experience, allowing instant task resumption with 0 delay

Task Manager | *HTML, CSS, JavaScript, Node.js, React.js, MongoDB*

- Created a full-stack web application with efficient task handling functionalities
- Executed CRUD operations to enable users to seamlessly add, delete, and modify tasks within the application
- Ensured smooth integration between back-end API with the front-end, ensuring a cohesive user experience

Car reverse sensor | *C++*

- Constructed a functional prototype of a car reverse sensor system employing Bluetooth connectivity through a Bluetooth module HC-05, controlled by mobile, connected to Arduino Nano(8-bit micro-controller)
- Controlled the car via Bluetooth using a mobile app. Detected obstacles with an ultrasonic sensor, activating a buzzer as the obstacle is within 5 cm
- As the car approaches closer to 2 cm from the obstacle, it stops automatically and the reverse function is disabled

Load Management | *C++*

- Implemented a micro-controller based system for automatic load shedding through relay mechanism with 8 loads
- Utilized a current sensor to monitor the battery State of Charge (SOC), sends a signal to Arduino Uno for the 8 channel relay to operate accordingly
- Transmitted signals to relays for efficient load management, shutting down the system at 30% SOC

Basic 1024 bit calculator | *C++*

- Implemented addition, subtraction, and multiplication operations for 1024-bit numbers
- Performed String manipulation, included an overflow check mechanism

SKILLS

C++, MySQL, JavaScript, HTML/CSS, Git, VS Code, MongoDB, React, Express, Node.js

ACHIEVEMENTS

- Conference paper accepted at IEEE ICITEICS 2024; Title: Solution of optimal power flow problems using Modified Hunter Pray Optimization Algorithm
- Accomplished change of discipline in 1st year securing a CGPA OF 9.09/10.(Chemical to Electrical engineering)
- Qualified JEE Advance (2020)
